

Talha İsmail DİLEK

Information Systems Engineering Student

📍 Antalya, Türkiye ✉ t.ismaildilek@gmail.com 🔗 linkedin.com/in/talhaid 🌐 github.com/talhaid 🔗 talhaid.tech

PROFILE

Senior Information Systems Engineering student with a strong focus on Data Engineering and Advanced Analytics. Experienced in deploying end-to-end pipelines that transform raw data into actionable insights. Passionate about real-time streaming and distributed systems, with practical experience spanning automated data extraction, AI analytics, and business intelligence solutions.

EDUCATION

B.Sc. in Information Systems Engineering
Mehmet Akif Ersoy University

2022 – 2026

SKILLS & TOOLS

- End-to-End Data Pipelines
- Data Analytics
- Data Streaming (Kafka)
- LLM & Agentic Workflows
- Python
- Git & GitHub
- SQL (BigQuery & MySQL)
- Backend & API
- Production Deployment & Cloud
- Automation & AI Integration
- IoT & Embedded Systems
- Frontend / Visualization

LANGUAGES

English
Fluent (B2)

Turkish
Native

PROJECTS

Vantage: Live Geopolitical Briefings & Event Mapping Platform, 2026 - [vantage.talhaid.tech](#)

Developed a platform that actively tracks the global agenda by ingesting multi-source RSS feeds and live wires, utilizing search-grounded workflows to deliver continuous geopolitical briefings alongside an interactive event map.

Data Automation, Analytics & Visualization Portfolio, 2025

- - Data Ingestion & Automation: Developed Python scripts for automated data collection, including an Amazon web scraper and a live Crypto API data extraction pipeline.
- - Cleaning & Exploratory Analysis: Executed comprehensive data cleaning and analysis (EDA) using SQL and Excel to handle NULL values, eliminate duplicates, and isolate structured trends.
- - BI Dashboarding & Reporting: Designed interactive dashboards in Tableau (Airbnb market analysis) and Power BI (survey metrics) to translate raw datasets into actionable visual insights.

Industrial Automation & Embedded Utilities Portfolio, 2025

Developed a suite of production-grade tools featuring serial COM parsers for automated ZPL thermal label printing, IEC 62056-21 smart meter data extraction (OBIS/JSON/CSV), an ESP32 real-time environmental monitoring dashboard with OTA updates, and automated archive ingestion pipelines for recursive document extraction.

More projects and details are available on my GitHub and portfolio website.

PROFESSIONAL EXPERIENCE

IoT Data Intern, MicroZerr

06/2025 – 09/2025
Ankara, Türkiye

- Led problem identification phases by analyzing high-frequency IoT sensor data, effectively translating raw data telemetry into actionable product solutions.
- Optimized and productized automated data pipelines using cloud infrastructure, significantly enhancing data-driven features and processing efficiency.
